EDUCATION

LaGuardia Community College (CUNY) — A.A.S. in Programming & Software Development New York, NY | Expected May 2027

- Planned transfer: B.S. in Computer Science, CUNY — expected graduation Spring 2029
- Relevant coursework: Data Structures & Algorithms, Object-Oriented Programming (Java), C++ Programming, iOS App Development, Web Development

TECHNICAL SKILLS

- Languages: Python, Java, C++, Swift, JavaScript, HTML/CSS
- Tools: Git & GitHub (version control), VS Code, Eclipse, Xcode, Figma
- Concepts: Object-oriented programming, data structures & algorithms, debugging and troubleshooting, local data persistence (SwiftData, localStorage), responsive web design

EXPERIENCE

Air Force Research Laboratory — Summer Research Intern June 2026 – August 2026

- Contribute to a team research project on AI software assurance and security, applying cybersecurity concepts to evaluate the trustworthiness of AI systems.
- Grade measured outcomes of evaluation scenarios against a structured severity rubric under a blind scoring protocol, compare them with independently predicted severity ratings, and co-author the project's threat model.
- Set up and troubleshot a Python evaluation harness in an isolated virtual environment, resolving package-installation and API authentication issues by tracing failures through the request stack.
- Extended the framework with a custom evaluation scenario — porting and refactoring a multi-tool Python module suite, fixing cross-module imports, and registering it into the framework's versioned loader.

Housing Works — Mover / Logistics Support August 2024 – June 2026

- Sustained full-time logistics operations for 22 months while completing coursework, moving dozens of donated items per shift in a high-volume nonprofit warehouse.
- Caught damaged or unsellable donations at pickup several times per week, preventing wasted transport and avoiding downstream disposal costs for the organization.

PROJECTS

MyInternLog — SwiftUI, SwiftData, iOS

- Designed and built a native iOS app to systematically capture internship work for resume and interview preparation, implemented through four integrated features (tagged notes, structured reflections, a study queue, and photo logging) backed by local SwiftData persistence.
- Architected the data layer around five SwiftData models with cascading relationships, enabling reliable persistence across app relaunches and a schema migration with zero data loss.

KovaaK's Tracker — JavaScript, HTML, localStorage

- Built a browser-based aim-training tracker where users log scenarios, scores, categories, and session length through a structured form with validation.
- Managed session state with JavaScript arrays and objects, persisting completed sessions to localStorage so history survives page refresh, with dynamic DOM rendering and delete functionality for saved sessions.

Personal Portfolio — HTML, CSS, JavaScript

- Built and deployed a live portfolio site (codewithty.github.io/portfolio-tyler) presenting projects, skills, resume, and contact information using semantic HTML and responsive CSS.

PROFESSIONAL DEVELOPMENT

Tech Talent Pipeline Residency Program — Participant April 2026 – Present

- Selected for a competitive CUNY career-readiness program focused on technical preparation and software career pathways.
- Completing intensive software engineering coursework and expanding a portfolio of independent projects alongside program mentorship.

Anthropic Certifications June 2026

- Completed AI Fluency: Framework & Foundations and Claude 101 (Anthropic Academy certificates).
