Tyler Smith

Brooklyn, NY | 917-594-7722 | tyler88967@gmail.com | linkedin.com/in/tylersmith777 | github.com/codewithty | codewithty.github.io/portfolio-tyler

EDUCATION

LaGuardia Community College (CUNY), A.S., Computer Science Expected June 2027
Long Island City, NY | GPA: 3.01 | Intended transfer to a four-year B.S. in Software Engineering

EXPERIENCE

iOS Development Intern, What's the Move (WTM) Jul 2026 – Present
New York, NY (Remote)

- Ship features and bug fixes to a live SwiftUI and Supabase iOS app with real users, translating founder product goals into scoped tickets and merging work through a PR review workflow with a small engineering team.
- Own end-to-end development of in-app event ticketing (in progress): SwiftUI purchase flow, Stripe Connect payments and host business onboarding, and the Supabase data model behind them; scoped v1 with the founder.
- Built an event photo wall supporting photo and video posts with attendee-only visibility, spanning SwiftUI view work, media upload, and Supabase data modeling.
- Diagnosed a broken follow-request flow caused by both a masked SwiftUI conditional in the view layer and a missing Row-Level Security insert policy on the backend, and fixed both layers.
- Traced inflated follower counts to a duplicate pair of database triggers double-counting on every follow (39 of 154 profiles affected); removed the redundant trigger and recomputed counts from source data.
- Hardened backend authorization with Postgres Row-Level Security: restricted posts to followers-only and added an admin-only delete policy so the founder could remove reported posts from the moderation screen.
- Shipped UX improvements, including tappable host and attendee profiles on event pages and notifications that mark as read on open; resolved a guest-login crash on launch traced to a one-character config error.

Summer Research Intern, Air Force Research Laboratory (AFRL), Information Directorate Jun 2026 – Aug 2026
Administered through the Research Foundation for CUNY | Rome, NY

- Owned the measurement component of a three-person AI security research project, building a Python scoring module and per-objective assessment checkers from framework specifications, verified line-by-line against the spec.
- Wrote 41 passing unit tests, including a full input-space sweep proving the scoring module could not produce an out-of-range result.
- Designed the scoring methodology to avoid bias by having two team members score independently before reconciling; built the study's core comparison artifact and threat model.
- Presented the work to a PhD faculty audience as part of a three-component team talk; material cleared for public release through AFRL Public Affairs.

Mover / Logistics Support, Housing Works Aug 2024 – Jun 2026
Brooklyn, NY

- Sustained full-time, customer-facing logistics operations for 22 months, handling pickup, transport, and intake of donated goods; caught damaged or unsellable donations at pickup several times per week.

PROJECTS

MyInternLog | *Swift*, *SwiftUI*, *SwiftData*, *PhotosUI* github.com/codewithty/MyInternLog

- Built a native iOS app that helps interns log daily work so they can recap it for resumes when an internship ends, with tagged quick notes, guided daily reflections, a study queue, and photo attachments via PhotosUI.
- Modeled persistence in SwiftData with typed enums for note tags and cascade-delete relationships between reflections and their answers to prevent orphaned records.

TECHNICAL SKILLS

Languages: Swift, Java, Python, JavaScript, SQL
iOS / Mobile: SwiftUI, SwiftData, Xcode, PhotosUI, iOS app development
Backend / Tools: Supabase (Postgres, Auth, Row-Level Security), Stripe Connect, REST APIs, React, Git, GitHub PR workflow
Practices: MVVM and iOS design patterns, unit testing, debugging across UI and backend layers, relational databases, data structures

PROFESSIONAL DEVELOPMENT

- NYC Tech Talent Pipeline (TTP) Residency, LaGuardia CC | Technical training cohort, completed Oct 2026
- Aspire Leaders Program (Aspire Institute) | Leadership development program, completed 2026
- Anthropic Academy | Completed coursework on applied AI development
